

HOW TO MEASURE A SPA COVER

TOOLS REQUIRED:

- 2 straight edges (at least a metre long)
- tape measure

MEASUREMENTS NEEDED:

- Length (L)
- Width (W)
- Radius of any rounded corners (R)
- Height of lip
- Length of sides (S), other than length and width
- Positions of any controls higher than top of lid

1. Tick which shape of spa best applies.

2. To measure the length of a side when corners are rounded, make projected corners (with the two straight edges) & measure the distance between the corners of the projections.

3. Measure the radius of corners (c) by measuring from where the lip begins to curve, along your straight edge to the projected corner.

NOTE- Always measure to the very outside of the spa, e.g. Outside edge of lip.

Record your measurements here:

Length (L) _____

Width (w) _____

Corner radius (c) _____

Height of lip _____

Side one (S1) _____

Side two (S2) _____

Side three (S3) _____

Side four (S4) _____

A-B _____

A-C _____

OTHER INFORMATION:

Make and Model? _____

Inground or Portable? _____

Colour of cover? _____

Any controls higher than top of lid? _____

Measure & mark position on drawing. -distance of button from each end of side and from outside edge

Locks- 4 standard

Positioned 500mm each side of hinge for FOUR locks, an extra two at each end for six. (four locks are sufficient for smaller spas unless in a high wind area)
